

WELCOME TO LAUNCESTON COLLEGE

Case Study

Launceston College

Cornwall

Mark Adams is the Head of Science at Launceston College in Cornwall. His department have been using Boardworks Science resources on their interactive whiteboards throughout their KS3, KS4 and KS5 teaching since 2002.

Mark comments, "I am very impressed with Boardworks Science resources. It is the ease of use that most appeals; the accessibility of the PowerPoint format means I can edit the presentations and change the order of the slides to suit individual lessons."

Science teachers at Launceston College use Boardworks resources because they cover the whole curriculum. "The fact that they have tailored sections arranged neatly around the curriculum really helps when planning my lessons," Mark comments. "They save me loads of time!"

The science department have found that their students respond well to the virtual experiments and animations throughout the Boardworks resources. "The kids love the animations," says Mark. "The animations are the thing that sets Boardworks apart from any other packages... They're ideal as a lesson starter to introduce topics or at the end of a lesson to consolidate students' learning."
